

Exercises:

- 1) Write a method, which removes the duplicates contained in a passed array.
 - a) Also write a method, which removes the duplicates contained in a passed *ArrayList*.
 - b) Removing duplicates in *ArrayList* can be implemented differently from removing duplicates in an array, esp. as far as performance is concerned. – What does this statement mean? If appropriate play around with different implementations! – Where are pros and cons?

Remarks:

- As always.
